

NEWS ALERT

New Cortec® Coatings Video Shows How to Convert Rust with CorrVerter® Rust Primer

A new Cortec® video shows how to easily turn a rusted metal surface into a passivated, protected layer using CorrVerter® Rust Converter Primer!

The video explains that CorrVerter® should be properly mixed before use. It can then be applied to rusty metal surfaces from which any loose rust has been removed. CorrVerter® goes on white and dries black. It should be left to dry for 12 hours before covering with a water-based or solvent-based topcoat for long-term corrosion protection.

This short video can be viewed along with other informative videos at the new Cortec® Coatings website and on the Cortec® YouTube channel!
