I GROUND MANAGEMENT
Hilltip

The StrikeSmart PLUS controller enhances the HTrack system for winter maintenance. Equipped with an 8.7-inch touchscreen, it offers real-time weather monitoring and surface condition analysis. This intelligent controller recommends optimal materials and spread rates, while automating equipment settings for precise ice management. Paired with the TempStriker sensor, it delivers tailored forecasts and suggests suitable application rates and materials, from granular salt to liquid brine.

J HEAT PUMP CHILLER
WaterFurnace

TruClimate 900 heat pump chiller features a variable speed compressor with OptiHeat technology. It can operate as a hot water or chiller water system or a simultaneous heating and cooling source. Unlike traditional chillers that are either dedicated to heating or cooling, it delivers 44-degree chilled water and 140-degree hot water simultaneously from a single chiller.

K COATINGS
Cortec

The MCI-2018 X is a 100 percent silane penetrating water repellent for concrete surfaces. Its primary function is to line concrete substrate pores with a hydrophobic layer that reduces the ingress of moisture, chlorides and carbonation, thus extending the service life of the structure. If applied after a penetrating surface applied corrosion inhibitor, it prolongs the protection period of the corrosion inhibitor. It allows the surface to stay fully breathable and retain its original appearance.

L PLUMBING
Flushmate

The 503UH series pressure-assist system uses only 0.75 gallons per flush (gpf). The ultra-high efficiency system, which is compatible with the company's I-Flush technology, uses 53 percent less water than 1.6 gpf models without compromising performance. It is engineered for quiet performance.
