

NEWS ALERT

Demo Video: This Company Tried Eco Wrap® and Loved It!

Society is on the cutting edge of transitioning to less-polluting packaging materials, thanks to popular opinion, government regulations, and personal concern. Yet companies are still getting used to adopting new technologies and sometimes need extra guidance and support to make the switch. This Eco Wrap® video is a great tool to help.

The video was taken in summer 2021 at a coffee company that used Eco Wrap® to wrap a pallet of coffee sacks. By testing the Eco Wrap® on their own equipment, the customer found that they loved the stretch wrap and later ended up placing an order to improve their environmental profile with a material designed to meet the ASTM D6400 standard for commercial composting.*

Just as this company had to try Eco Wrap® to discover how much they liked it, other companies today need to see and experience Eco Wrap® for themselves in order to get comfortable adopting it. This demo video is a great way to get started by helping potential users see how it works before they decide to give it an actual trial run on their own equipment.
