KASTO - 27

KASTO manufactures the world's largest ranges of sawing machines and automated storage systems for long stock and sheet

QUANTUM CONTROLS - 9

Quantum's Unique Drive Rental Solution. Weatherproof Variable Speed Drives up to 15MW available: Any time, Any Place, Any Weather

AUTOMECHANIKA - 48

Innovation will be the leading theme for the 2019 event, held at Birmingham NEC on 4 to 6 June.

CORROSION PROTECTION

ECOCORTEC

ANTICORROSION FILMS PLANT LAUNCHES NEW BROCHURE!

We are proud to announce that brand new brochure on EcoCortec®, first Croatian bioplastics and anticorrosion films plant has been launched. Last year plant's management finalized the big expansion project: new facility has been built and production capacity is now tripled. New brochure contains in-depth information about EcoCortec's new equipment, manufacturing process, technologies, products, customer service, in-house laboratory and much more. EcoCortec® specializes in manufacturing of Cortec's innovative Vapor phase Corrosion Inhibitor (VpCI®) films.

The plant offers complete converting, extruding and printing capabilities. Located in Croatia's Baranja region on a 10,000 square meter site, the facility is in an excellent geo-strategic location. Croatian plant manufactures films and bags according to customer specifications in terms of the product size and performance.

Together with new offices and brand new 2000 m² facility the plant also includes state-of-the-art extrusion line E5. EcoCortec® has sideweld and bottomweld converting machines for making wide range of bags, a film rewinder and recycling machine allowing elimination of waste from the production process. Plant's team is continually improving its technologies, services and manufacturing process to meet expectations for highest-quality films and bags delivered on time. EcoCortec® is utilizing green environmentally safe technologies while strongly promoting responsible approach towards the community. EcoCortec® films as well as the production process conform to highest environmental standards. The plant has pioneered two technologies of biodegradable and compostable films, Eco Film® and Eco Works®. They offer a certified biodegradable alternative to polyethylene films and bags while offering performance characteristics superior to both low and high density poly films.

As a company investing in research and development, EcoCortec® is successfully cooperating with numerous scientific institutions and universities. New product development, research papers, participation and organization of scientific and educational seminars are just part of this

valuable, long term cooperation. Continuous research and innovation approach combined with ecological awareness are among reasons why we are a leader in corrosion protection industry.
