PRESS RELEASE

FachPack 2019

Premium Sustainable Packaging for Corrosion Protection!

EcoCortec® d.o.o. - Member of Cortec® Group of Companies Exhibiting at FachPack 2019

Most plastic bags are manufactured from polyethylene, a product of natural gas or petroleum. While highly convenient, these bags pose a pollution problem if not disposed of responsibly.

With new trends, perspectives and opportunities, the European packaging sector is brimming with diversity and dynamism. EcoCortec d.o.o., a member of Cortec® Group of Companies and one of the fastest growing green corrosion protection packaging

producers in Europe will be exhibiting at FachPack 2019, demonstrating our range of

environmentally safe films and bags for corrosion protection. VCI/VpCI® films have already had a large impact on making corrosion protection environmentally

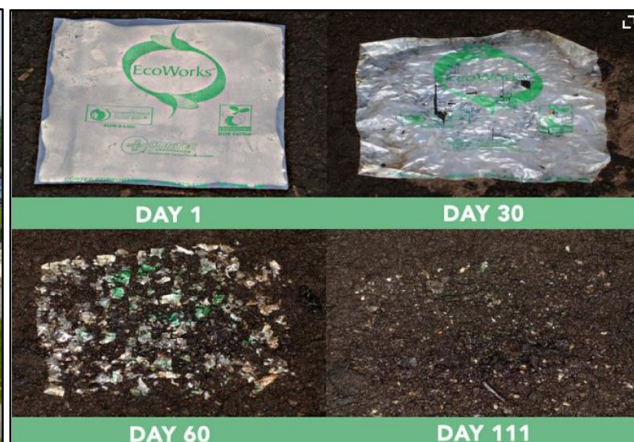

friendly by reducing the need for traditional hazardous and cumbersome rust preventatives. As FachPack trade show is growing to be more focused on environmentally safe materials it is an excellent platform for EcoCortec's patented technology to be presented with its wide range of packaging solutions. EcoCortec® manufactures recyclable VpCI® brand bags (used for corrosion protection of metals) that customers can send back to the plant after use to reprocess into new film at up to 20% recycled content (satisfying quality requirements). The customer receives a credit and EcoCortec receives an additional source of 'repro'. This provides a resourceful method for diverting thousands of pounds of waste from the landfill annually, helping both manufacturer and end user reduce their carbon footprint. Another option for minimizing the impact of plastic packaging is to use compostable bags that do not contain polyethylene and can biodegrade without harming the surrounding environment. Incorporating biobased content increases sustainability by drawing on a renewable resource

VCI/VpCI® films present a breakthrough in corrosion prevention and have become a global standard in this field. EcoCortec's films, papers and bags are made from renewable, biobased materials. As part of Cortec® Europe Group, EcoCortec® provides one of the best corrosion protection solutions available globally. The plant exports its wide range of products all over the world including Europe, Asia and USA

supplying biggest manufacturers in automotive, metal, marine, oil and gas, construction and other industries. Plant's certified biodegradable alternatives to polyethylene films and bags provide performance characteristics superior to both low and high density polyethylene films. Innovative and patented products offer one of the most extensive and biodegradable packaging lineups in the world. The plant has been expanded in 2018 with opening of new facility. Together with new offices the facility is 2000 square meters large and growing due to increasing demand for EcoCortec's products.

All-purpose waste bags and shopping bags under the EcoWorks brand name. These patented films and bags are compostable in a commercial compost setting and custom manufactured in EcoCortec facility (above)

The plant's team raised environmental standard to an even higher level by creating a plastics recycling center, which uses state-of-the-art reprocessing equipment. EcoCortec® looks forward to economic and environmental benefits and hopes to be a model for other manufacturers to follow in opting for sustainable technologies. EcoCortec® is partner in the €1.95 million European BIOCOMPACT project supported by the Interreg CENTRAL EUROPE Programme, funded under the European Regional Development Fund.

With FachPack, international exhibition for packaging technology offering fresh new look of the industry we are more than excited to be present and demonstrate our technology and latest innovations in the corrosion protection packaging field.

We will be glad to welcome you to our stand and speak with our industry experts located in **HALL 7A - BOOTH: 408.**
