New Factory in Beli Manastir, Croatia

## EcoCortec®- Biggest European Producer of Anticorrosion Films and Bags is Building a New Facility!

Due to continuous increase in demand, EcoCortec- a producer of VpCI® films and bags is increasing its capacities by building a new plant facility. Current expansion project is being co-financed by Croatian Ministry of Economy, Entrepreneurship and Crafts within European Funds Programme. By strengthening the plant's position in the market, new requirements for equipment and additional space are growing every day. Expansion and growth of production and building capacities as well as our team is an important part of EcoCortec's strategy but also comes as result of very good business results.

**EcoCortec's General Manager, Dijana Zrinski is signing the contract with a civil engineering construction company.**

After opening of tenders for public procurement, EcoCortec®'s leadership chose the best contractor to build a new facility. Additional production hall will boost plant's manufacturing capabilities and will help EcoCortec's staff respond even more promptly to all the market challenges. Launched eleven years ago, EcoCortec® has evolved in one of the leading producers of VpCI® films in Europe, continuously confirming its excellent position on the market. As part of Cortec® Europe Group, the plant provides one of the best corrosion protection solutions available globally.

EcoCortec®'s films and bags are manufactured utilizing Cortec's patented VpCI® technology which represents a breakthrough solution in corrosion prevention. From highly-effective film and foam technology to premium custom converted papers, EcoCortec® plant exports its wide range of products all over the world. Earlier this year the plant launched "Plastic Recycling Project" first of its kind in Europe. EcoCortec® implemented this European wide initiative to collect and recycle used films and bags. Within the Recycling Programme, Cortec's customers send their waste material back to the Croatian plant which is then completely recycled and used for manufacturing a new product.

**EcoCortec's packaging materials enable its clients saving costly time and labor. While no surface preparation or cleaning/degreasing is required, needs for oils and desiccants are also eliminated.**

Thanks to its smart leadership, innovative solutions and reliable team, the company's sales are growing every year. With 90% of products exported to Europe, Asia and USA, EcoCortec® has become one of the leading Croatian exporters in this field.
