## Europe's biggest VCI/VpCI plant just got bigger!

The continuous expansion of production and new equipment procurement is never completed. Establishing a stronger market presence requires acquisitions of new equipment with different capacities. We have recently released into operations a new, high capacity extrusion line and have increased our capacity by 50 percent!

EcoCortec is entering the third phase of the plant's planned construction and expansion. This includes a new production hall with three new extrusion lines, branding of VpCI paper® and storage of Cortec® chemical products. Line #3 will start up in December with another boost of capacity by 25 percent. EcoCortec® will also warehouse Bionetix biological products. Bionetix International, a Canadian company in the ownership of Cortec® Corporation is in the business of manufacturing microbial based bio-products.

**EcoCortec:** Line #2 in production

**EcoCortec:** Phase three – expansion project
