

NEWS ALERT

Bring Renewables Back to the Farm for Biobased Lubrication

Every farm has equipment, machinery, and moving parts that need to be lubricated now and then. What if instead of using standard polluting and non-renewable petroleum-based products to do the job, you could use biobased materials instead?

Cortec® makes that possible with EcoLine® ELP and EcoLine® CLP, two USDA Certified Biobased Products that can be used as all-purpose lubricants around the farm, in the shop, or any place general lubrication is needed. Both products are biodegradable and can be used for the following:

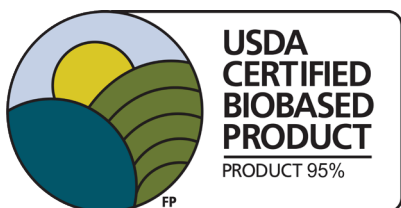

- Lubricating moving parts
- Loosening rusty bolts and locks
- Quieting squeaky hinges

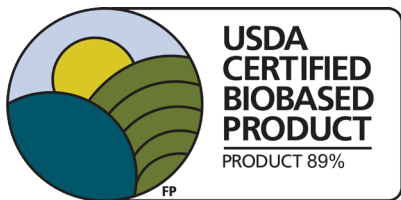

EcoLine® ELP is a top-performing biodegradable soy-based lubricant and penetrant for general purpose use. It outperforms three name brands in extreme pressure and anti-wear properties and has comparable corrosion protection and bolt-loosening power, with a better safety and environmental profile.* It contains 95% USDA certified biobased content.

EcoLine® CLP is a canola-oil-based version of a multifunctional penetrant/lubricant designed for indoor and outdoor use. It cleans and lubricates, while also leaving behind a persistent film of corrosion protection. It contains 89% USDA certified biobased content.

Whether you will be doing maintenance on a tractor, combine, harvester, outbuilding, or other implement, be sure to stock some EcoLine® ELP or CLP to perform basic lubrication, cleaning, and/or protection tasks around the farm in a more environmentally responsible way. Bring renewable materials back to where they started and put them to good use to grow more!
