## Present 2015

### METALURGICA DE SANTANDER LTDA C.I.

### FMS MANUFACTORAS SA DE CV

Instituto Politécnico Nacional  
"La Técnica al Servicio de la Patria"

### HIERRO RECUPERADO SA DE CV

### Etc.

### Be present

Registration includes coffee-break, Lunch, documents. Inscription rights : US\$ 151 or € 115 Payment by card  
<http://metalspain.com/paypal-mexico-fundicion.html> or Bank transfer in Euros or US\$

Lunch with clients is very appreciated in Mexico.

Congress Center and Hotel

HOLIDAY INN DIAMANTE - Querétaro

Directs flights from Dallas, Houston ...to Queretaro International Airport

### SPARE A THOUGHT FOR CRITICAL SPARES

Pump failures at oil production facilities globally—be it the Persian Gulf or the Mexican Gulf—are an occupational hazard, resulting in halted production and the loss of several thousand dollars of revenue and productivity for the business. It is mission critical to get the production line up and running quickly.

While this scenario occurs frequently, many companies fail to anticipate it. Consequently, maintenance crews are usually scrambling to find spare parts, which if on hand, are likely to have been in storage for a few years, and are

# FUNDIDORES

FUNDICIONES FERREAS Y NO FERREAS EN ARENA, COQUILLA Y FUNDICION A PRESION

now covered in rust. If the crew is lucky, the spare part works. If not, more time and money is lost in trying to fix the old part or find a new one.

With engineers focused on operations, this scenario is not as rare as it should be. Support services such as preservation of spares are often overlooked and considered of low priority. Too often, critical spares are stored with no protection at all. Responsibilities are divided between departments, and discussions on whose budget they fall under are protracted. This disastrous scenario can be avoided with a little forethought and planning, minimizing downtime and ensuring operations are kept running at peak performance.

Non-toxic rust removers such as VpCl®-422 can effectively clean the rust off parts to restore them to usable condition on the same day.

Preservation specialists at Cortec® work with asset owners in developing best in class, zero-defect, low-cost preservation solutions. Since many oil, gas, and power gen operations have warehouses full of spares that may have already rusted, critical spare preservation often starts with restoration. Non-toxic rust removers such as VpCl®-422 can effectively clean the rust off parts to restore them to usable condition on the same day. Biobased cleaners such as EcoLine® Cleaner Degreaser remove greases, oils, and other contaminants to prepare the parts for preservation.

## ENERGY SAVING MYTHS

This presentation will discuss the pros and cons of various energy saving ideas for aluminum melting and holding furnaces. The discussion will center around such items as recuperation, regenerative burners, fixed heat loss, molten metal circulation, and others. The emphasis will be on what works with cost effective Returns on Investments. Attendees will leave with at least nine (9) energy and money saving ideas for their aluminum melting and holding furnaces.

## DÜRR ECOCLEAN STRIVES FOR FASTER EXPANSION OF THE GLOBAL MARKET AND TECHNOLOGY LEADERSHIP

### LEADING IN PRODUCTION EFFICIENCY

After the successful refocusing under the umbrella of the Dürr Group, the Dürr Ecoclean Group has become the international market and technology leader in industrial parts cleaning over the last few years. Now, various strategic options for the future alignment and further growth of Dürr Ecoclean are reviewed. The goal is to strengthen the company's international presence and the proximity to customers as well as to enhance the spectrum of applications and products.

“The heterogeneous target groups of the Ecoclean business require different structures in research, development, production and sales as well as in marketing than those present at the Dürr Group. In a strategic partnership with another company or with an investor we see the opportunity to respond more flexibly to the demands of our markets and therefore to accelerate our growth”, explains Chairman of the Board Michael Förster, who runs the company together with CEO Frank Ringat.

The further global growth of the Ecoclean Group also requires a consolidation of the strongly fragmented competitive environment. This may be realized for example by the acquisition of relevant companies. “In the globally growing market for industrial cleaning technology
