### **PRODUCT NEWS RELEASE**

## **Cortec® Corporations M-369 forms a self-healing, moisture-displacing barrier film.**

Cortec® Corporations M-369 is an oil, grease and wax compatible anti-corrosion additive. When added to oils and waxes at a 5-10% concentration, it forms a self-healing, moisture-displacing barrier film. This film provides superior corrosion protection against aggressive corrosive environments, and can provide up to 2 years of indoor storage protection. M-369 combines the film-forming properties with Cortec's patented Vapor phase Corrosion Inhibitor (VpCI™), which provides protection in places unreachable by film-forming corrosion inhibitors. Making M-369 the most complete and cost effective corrosion protection system.

M-369 combines the film-forming properties with Cortec's patented Vapor phase Corrosion Inhibitor (VpCI™), which provides protection in places unreachable by film-forming corrosion inhibitors.

Cortec's M-369 provides excellent protection in humid, salt laden, and industrial environments where hydrogen sulfide and other contaminants are present. M-369 is easily dilutable with a variety of oils, waxes and solvents, is temperature stable up to 180°F (82°C), and will not affect V.O.C. compliance. Cortec® M-369 is a great raw material for formulating solvent and petroleum based rust preventative or temporary rust preventative coatings.
