

NEWS ALERT

“Gearing up” for Lubricant System Layup with M-531

No one wants to spend extra time dealing with corrosion problems when bringing idle assets back into use. That is why sufficient corrosion protection is essential during times of equipment layup or intermittent operation. With M-531, Cortec® offers preservation solutions all the way down to equipment lubricant systems and gearboxes.

M-531 is an oil-based package of corrosion inhibitors that provides outstanding vapor and contact corrosion protection in a wide variety of industrial lubricant applications where excellent rust protection and water resistance are required. It can also be used in hydraulic applications and is suitable for long-term preservation or conditions of intermittent use.

M-531 is compatible with most conventional and synthetic oils. It has excellent non-staining properties that make it useful even for corrosion protection on coiled steel or stacked parts. M-531 protects the following metals:

- Carbon Steel
- Stainless Steel
- Copper
- Brass
- Aluminum
