### **NEW PRODUCT RELEASE**

#### **MCI® Peel Off Coating Protects Glass and Windows From Construction Debris**

A new labor saving coating easily peels off glass and windows when construction or renovation is complete. A simple to use coating, workers just spray, brush or roll the coating on to the surface to be protected during construction. For removal, it peels off in large sheets. The Cortec® MCI® Peel Off Coating can reduce time and labor costs as much as 50% for set-up and removal compared with traditional methods of taping plastic sheeting.

The easy to use coating provides mechanical protection against nicks, abrasion, scratches, and over-spray to the surfaces it covers. It offers strong resistance to solvent paints and features Cortec® patented corrosion inhibition for added protection of metal surfaces.

Cortec® MCI® Peel Off Coating protects glass windows from construction debris while significantly reducing time and labor costs.

It represents a new level of technology in non-solvent, peelable coatings. Cortec® Research Laboratories have incorporated their latest green technology into the new coating. The product is specially formulated as an acrylic, water-based liquid that is VOC compliant and non-flammable. Environmentally safe to use, it can be disposed of as simple solid waste.

Cortec® MCI® Peel Off Coating can be used to protect non-porous substrates such as windows, walls, ceilings, floors and light fixtures. It is not recommended for porous substrates such as wood, brick, stone, or concrete. The coating can also be used on non-porous primed surfaces. After the coating is applied, it dries to a clear film that allows the inspection of the surface. It does not leave a residue after removal. When peeled from the surface, the coating leaves a clean, ready-to-use substrate.
