PRODUCT RELEASE

Cortec® MCI® -2020 BFD – It Really is a BFD!

MCI®-2020 has been enhanced with a blue fugitive dye (BFD) which provides visual verification of where the product has been applied to help easily identify treated areas. As a surface applied migrating corrosion inhibitor (MCI®) this product is designed to penetrate through cementitious materials including concrete, mortar, and limestone. MCI®-2020 BFD migrates in both liquid and vapor (gas) phases through the pore structure, forming a protective molecular layer on embedded reinforcement. MCI®-2020 BFD provides corrosion protection against carbonation, chlorides, and other contaminants.

The dye fades with exposure to UV light in as little as seven days.
