

NEWS ALERT

Cortec® Europe Group at MTECH Conference In Porec!

We were pleased to have members of Cortec's Europe Group recently share insights into Cortec® technology solutions and developments at the MTECH conference in the coastal city of Porec, Croatia. This international scientific conference is held every two years and is organized by the Croatian Center for Non-Destructive

Testing, the Croatian Society for Materials and Tribology, the Croatian Society for Heat Treatment and Surface Engineering, and the Croatian Society for Materials Protection. The conference brings together scientists, students, engineers and industry experts into an inspiring environment for exchanging experience in the field of innovation, materials development, and testing methods. It also links those who are engaged in experimental research with those whose activities include design, production, quality control, and other aspects of industrial production.

NEWS ALERT

Companies from all over the world had an opportunity to present their products, activities, and research in their field of materials during the workshops and conference exhibition. Cortec's own representatives—Ivana Radic (Cortec's VP of sales for Europe) and Ivan Rogan (General Manager of CorteCros®)—were members of a conference technical committee and presented two technical papers:

“Economic and environmental impact of traditional rust preventatives as compared to novel biobased temporary coatings” and “Application of VpCl® inhibitors during hydrostatic testing.”

We are especially happy that our Cortec® Europe team was able to attend a NACE certified “Coatings” training course co-organized by the Croatian Society for Materials Protection and

hosted by Mr. Terry Greenfield, current president of NACE International. Mr. Greenfield's presence at the conference was a big honor, and his 40+ years of experience in the corrosion industry greatly enriched the conference's program. Mr. Greenfield also held a lecture entitled “Corrosion Management and its relationship International IMPACT-PLUS.” Thanks to the rich scientific and social programs of the conference our team had an excellent opportunity to network with renowned professionals from the corrosion protection industry while giving more detailed insights into Cortec® technology.
