FROM THE FRONT COVER

Protective Packaging reveals OEM brand & ID of parts

Protective packaging clearly identifies OEM metal components with their part ID and verifies the part as a genuine OEM component. The packaging simplifies logistics for multi-national OEMs with manufacturing and assembly

in a variety of countries. Informational and warning text can be included for destination personnel or customs. Parts are ready for immediate use without any cleaning or degreasing. User simply opens the package and the part is ready for service or further assembly. The packaging provides clean protection for ferrous and non-ferrous metal parts during shipment and storage for up to two years. It comes in sheets and bags to handle various size components.
