

NEWS ALERT

Get Ready to Wrap Up for Winter Weather with MilCorr® VpCI® Shrink Film!

The cold winds and snows of winter will be upon many of us all too soon! That means it is not too early to start planning to protect any extra equipment that has to be stored outside.

What are you going to do with all those boats or other summer recreation vehicles that need to be put away for the season? Or what about those pieces of industrial equipment, piping, heat exchangers, valve spares, etc., that you have no room to store inside?

You may already have a standard procedure in place for covering them with tarps, but sometimes, that is not enough. Tarps can wear out or blow off and may need frequent replacement without even protecting the equipment from rust.

MilCorr® VpCI® Shrink Film has shown itself to be an outstanding alternative even known to withstand the force of hurricanes. It is great not only because it provides heavy-duty physical protection against the elements—UV exposure, wind, rain, and snow—it also contains corrosion inhibitors that actively protect the metals from rusting.

Combined with other solutions such as VpCI® Emitters, VpCI® Pouches, VpCI®-130 Series Foam, or oil additives for internal equipment protection, MilCorr® VpCI® Shrink Film is an excellent overall preservation solution for outdoor storage this winter—or any season!
