

NEWS ALERT! NEWS ALERT! NEWS ALERT!

October 2002

There are some exciting advancements happening at Cortec®!

Cortec® Advanced Films division, in Cambridge MN, has a new co-extruding line for VpCI™ Stretch Film up and running. The Co-Ex Line's new formulation is PIB free, 100% recyclable and contains no surface tacifiers. Our new line has 3 million lbs. (1,500 metric tons) annual capacity and is available in hand wrap, machine grade and anti-stat.

Cortec® is excited to announce several new publications. The Steel Industry brochure addresses the unique corrosion problems faced in the production and transport of flat-rolled steel. Cortec® is environmentally friendly ISO 14001 certified and provides products that dramatically cut costs by eliminating rust, speckling, staining and other forms of corrosion. There is a VpCI™ product that protects steel at all stages of production. Since the battle with corrosion does not end with the production of the steel coil Cortec® also offers a full line of packaging solutions for storage and transport. Whether "thru-the-eye", cocooned, or on skids, Cortec® has been the leader paving the road to more efficient corrosion-free flat rolled steel packaging.

In addition to the Steel Industries brochure Cortec® is proud to release the all new MRO (Maintenance, Repair and Operations) Industrial catalog. This catalog includes complete line of unique, high performance products based on Cortec®'s patented VpCI™ technology. The product categories covered in the catalog are Electrical & Electronics, Maintenance & Repair, Eco Products, VpCI™ Additives and Concrete Protection. The MRO Industrial catalog was created and produced entirely at Cortec® Corporation

headquarters, in St Paul MN, by the dedicated and talented people in Sales, Marketing and Document Production. Every individual product in the catalog contains a list of product highlights and a full color picture. In addition, important features of each product category and possible applications are listed. The MRO Industrial catalog is a powerful new sales tool and is another wonderful example of why Cortec® is the world-leader in VpCI™/MCI® technology. And the best of all, our MRO products are produced in-house by our Spray Technologies division located in Spooner, Wisconsin.
