

NEWS ALERT

Cortec's CorrVerter® Featured in April Issue of Pollution Equipment News!

Water-Based Primers

CorrVerter® is environmentally friendly, water-based primers contain a chemical chelating agent that modifies surface rust into a hydrophobic passive layer. Combined with high solids waterborne latex with low water vapor permeability, these coatings offer long-term protection against corrosion. It can be applied under varying weather conditions and top-coated with VpCI®-386 or VpCI®-387, for added UV stability. CorrVerter® can be used when proper cleaning or sandblasting is difficult. — **Cortec Corporation,**
