## Take a New Approach to Garbage Disposal Maintenance This Year!

Probiotics are a growing segment in the health food industry, touted for their immune and digestive system benefits. But what if these same natural mechanisms could be harnessed for their benefits in cleaning applications such as garbage disposal maintenance?

**Bionetix®** took this step last year with the release of **ECO-DISPOSAL™**, a probiotic garbage disposal cleaner/freshener. When users apply an **ECO-DISPOSAL™** pouch to their garbage disposal unit, it provides initial cleaning power and leaves behind a fresh lemon fragrance. However, the benefits do not stop there. **ECO-DISPOSAL™** also contains 2.5 billion bacteria that awaken when in contact with water and start digesting organic waste. These probiotics cling to garbage disposal and drain walls for ongoing long-term waste digestion and garbage disposal maintenance benefits in between routine cleaning.

**ECO-DISPOSAL™** is great for both commercial and residential garbage disposals, as well as septic tanks. With **ECO-DISPOSAL™**, the time has come to stop settling for standard garbage disposal maintenance and explore the longer-lasting benefits of waste-digesting probiotics at work. Contact **Bionetix® International** to learn more about using **ECO-DISPOSAL™** in your garbage disposal this year:
