Follow Your 'Gut' Instinct: Choose Probiotics to Boost Livestock Health!

Many of us have heard of the benefit of prebiotics and probiotics to support our digestive health and immune systems. So, why not use the same concept to boost livestock health? That is exactly what Bionetix® International's Direct Fed Microbials are designed to do for livestock and aquaculture species in the following categories:

- POULTRY-FEED™ (for chickens)
- DAIRY-FEED™ (for cows)
- SWINE-FEED™ (for pigs)
- AQUA-FEED™ (for fish, shrimp, and other aquatic species)

Each of these natural feed additives contains beneficial bacteria, mannan oligosaccharides (MOS), and other nutrients and stimulants that support healthy digestion and boost the species' immune system to fight disease and infection.

Rather than relying on harsh antibiotics and growth hormones, farmers can implement natural strategies for improving livestock health, productivity, and weight gain by using Direct Fed Microbials. Exciting results and side benefits have already been noted, for example, in shrimp fed with AQUA-FEED™ achieving a better average gain and higher survival rate than normal, and in manure from cows fed with DAIRY-FEED™ having a reduced ammonia smell.
