PRODUCT NEWS RELEASE

Cortec® Creates Another Innovative Earth-Friendly Product!

Substantial pressures have been placed on the industry to provide safe solutions for the elimination of various pollutants in soil and water. Cortec's S-607 Bioremediation Additive works to degrade petroleum, crude oil, and other stubborn organics. S-607 is comprised of naturally occurring strains of bacteria (*Pseudomonas*) that work to digest pollutants. During the bioremediation process the microorganisms will use available oxygen to convert the organic components into carbon dioxide, water, biomass, and inorganic salts. The biological treatment destroys organic waste leaving only harmless end products, thus eliminating any future environmental risks or liabilities. S-607 is a great addition to the Cortec® product line because it meets Cortec's standards for biodegradability and safety. S-607 Bioremediation additive is an EPA approved product; and Cortec®, like the EPA, is working towards a cleaner, healthier environment for the world.
