

Product Review

Biodegradable Eco Wrap

Eco Wrap, a new stretch film from Cortec Corporation, is a combination of polyester film and a biodegradable cling coating that conforms to domestic and interna-

tional compostability standards. It can be used with conventional stretch film equipment. The superior strength, film reduces the number of wraps needed for an application, typically reducing three wraps to two wraps. For some palletizing applications, a 1.0 mil Eco Wrap can replace the traditional 1.6 mil film, reducing the total amount of film needed.
