## Use VpCI® Super Penetrant to Keep Auto Repairs from Grinding to a Halt

Auto repairs can grind to a halt when parts are rusted together and locked in place. If workers cannot remove the parts, they will not be able to replace them either. Fortunately, VpCI® Super Penetrant offers a quick way to solve this problem by penetrating through thick rust in a matter of minutes. At the same time, it lubricates metal so frozen parts can move freely. This provides a quick solution for mechanics who do not want their work to slow down simply because of corrosion.

VpCI® Super Penetrant is also a great lubricant to solve the problem of squeaky hinges or loosen other rusty parts around the shop. It displaces moisture and leaves behind an ultra-thin protective film for six months of corrosion protection. Keep a handy aerosol can in stock for quick projects or get it in bulk to apply by brush or dip tank for larger projects. VpCI® Super Penetrant can be used on carbon steel, cast iron, aluminum, and copper.
