### PRODUCT NEWS RELEASE

## Cortec® Corporation Introduces VpCI 609® Biodegradable Powder for Wet or Dry Protection.

Cortec® Corporation's VpCI 609® Biodegradable Powder is a water-soluble Vapor phase Corrosion Inhibitor (VpCI™) powder for wet or dry corrosion protection of ferrous metals and aluminum. VpCI 609® Biodegradable Powder creates a monomolecular inhibiting layer on the metal surface, providing protection for up to 24 continuous months. VpCI 609® Biodegradable Powder does not contain nitrites or phosphates.

VpCI 609® Biodegradable Powder can be applied in dry form by dusting, fogging, or sprinkling. Apply VpCI 609® Biodegradable Powder in aqueous form by spray, brush, flush, or immersion. After application simply cover and seal the interior cavity. Fogging is easily achieved by using a low-pressure air hose and sandblast cup. Large conventional sandblasting systems may also be used.

VpCI 609® Biodegradable Powder should be used at a rate of 0.3-0.5 ounce (8.5-14 grams) per cubic foot (28 Liters) of enclosed space (300-500 g/m<sup>3</sup>). The dosage can be increased for more severe conditions. Use VpCI 609® Biodegradable Powder at 0.5% by weight of water should be used for aqueous applications.
