PRESS RELEASE

New Brochure Presents Safer, Simpler Solutions to Industrial Water Corrosion

Cortec's new brochure, "Solutions to Corrosion for Industrial Water Applications," introduces water treatment professionals to many safer, simpler options for asset preservation. Whether your equipment will be offline for two weeks or two years, Cortec's highly effective corrosion solutions help keep boilers, closed loops, and evaporative cooling water systems in good condition while minimizing downtime and labor costs.

Many of Cortec's products contain Vapor phase Corrosion Inhibitors that offer multi-phase protection—forming a self-replenishing molecular barrier below the surface of the water, in void spaces above water, and at the air-water interface. This allows the flexibility of protection in either dry or wet layup—for the long-term, on standby, and sometimes even during operation. Cortec's outstanding layup strategies help keep your equipment corrosion-free and make it easy to bring assets back into operation.

Cortec® offers a wide range of corrosion solutions that are much safer and/or simpler to use compared to standard protection methods. With Cortec® strategies, you can replace the cumbersome use of desiccants and avoid the hazards associated with nitrogen blanketing and hydrazine. Cortec's broad range of organic corrosion inhibitors are also generally easier to discharge into than traditional inorganic inhibitors that do not biodegrade.

Cortec® water chemistry allows you to replace nitrites, molybdates, phosphonates, and phosphates.

For easy reference, the new brochure includes a product selection guide organized by the following water treatment categories:

- Boilers
- Closed Loops
- Cooling Water
- Additives
- Specialty/Multi-Use Applications

To learn more about Cortec's "Solutions to Corrosion for Industrial Water Applications," please view the new brochure at the following link:
