

Fleet and Driver Monitoring in One System

Burnley Council has equipped its entire RCV and sweeper fleet, comprising 17 vehicles, with live camera systems and has switched to a web-based software system to track, monitor and scrutinise vehicles and drivers. The RXLite LIVE camera recording system from Fleetclear enables the council to track its fleet in real-time.

“The cameras enabled us to continue monitoring the fleet during the COVID pandemic when site visits

were minimised. The Fleetclear camera systems also help us manage our trade waste service, in particular verifying any ‘missed bin’ claims,” says Tom Ormerod, Contract Manager, Streetscene,

Burnley Council. “All the information we need is now easily accessed on one system. We can track our entire fleet in real time, receive operational alerts, search, and retrieve recorded footage, scrutinise fuel efficiency, optimise routes and monitor driver safety. We also receive automatic equipment health status reports, so we know if there are any problems with any of the cameras and we use the system to assist with driver training. We can check the number of reversing alerts for example and check that a banksman is being utilised. We can then address any health and safety best practice issues as part of our ongoing training programme.”

ever. Recycling is mainstream, but when it comes to recyclable barrier paper, the options are more limited. It is only more recently that companies like Cortec® have done extensive R&D to produce recyclable barrier papers that meet an important need while giving users a responsible disposal channel.

Cortec® offers two kinds of barrier paper. Both are USDA Certified Biobased Products, opening the door to a ‘circular economy’ process of harnessing renewable resources that can be used and eventually recycled into other products. EcoShield® Barrier Paper offers basic barrier protection with a coating that resists water vapor, grease, and oil. Its Water Vapor Transmission Rate (WVTR) makes EcoShield® Barrier Paper a competitive alternative to polycoated paper and much superior to waxed paper. EcoShield® Barrier Paper contains 65% USDA certified biobased content and passes the U.S. FBA’s repulpability testing and E.U. recyclability testing.

Barrier Papers from Cortec

In today’s world of abundance and exploding e-commerce, there seems to be more packaging waste than

Protects workers even if:

- Trapped
- Concealed
- Injured
- Unconscious

Guardian Ultra is the latest intelligent personnel protection product from Safetech. It prevents accidents by detecting anyone in danger and stopping the machinery. The new system features extensive improvements using state of the art technology, with digital monitoring and reporting. A PL-d has been validated by an independent test house. The aerial frame has been redesigned using glass-reinforced plastic, which is light yet strong.
