

# Cortec® Corporation Europe

## Croatian Team Proudly Presents New Zagreb Offices:

### Cortec® Corporation European Operations and EcoCortec® d.o.o. Global Sales and Marketing Offices!

We are proud to announce the opening of our new Zagreb offices: Cortec® Corporation European Operations and EcoCortec® d.o.o. Global Sales and Marketing. Our sales and marketing teams in Zagreb have moved to a new location in an elite part of the city situated on green hills above the city center. The offices are located on 350 m<sup>2</sup> of an urban villa which houses a small corporate hotel on the upper floor. This on-site lodging will be offered to colleagues and partners who visit us in Zagreb and wish to stay close to our sales and marketing offices.

The villa also houses a kitchen area and modern conference room for business meetings. A wonderful terrace view of famous Zagreb hiking locations, Sljeme, and the medieval castle of Medvednica mountain allows our guests to enjoy Zagreb's most attractive locations in addition to the complete peace and privacy of the villa's own park and forest. With the purchase of this new facility, EcoCortec's General Manager, Dijana Zrinski, will be alternating between her office at the Beli Manastir plant and the new Zagreb office, where she will be spending two weeks per month.

These new offices mark a new phase in the growth of the Croatian Cortec® Family. The past year has been very successful with growing sales in Europe. A new plant launched this fall in Beli Manastir made EcoCortec® the largest manufacturer of environmentally responsible VpCI® anti corrosion packaging in Europe, with a new 1000 m<sup>2</sup> polymer processing plant completed earlier this year.

In addition to allowing EcoCortec® to serve more customers with more products, the new plant allows us to extend the life of the materials used in its films and bags. CorteCros®, Cortec's daughter company and chemical manufacturer located in Split is also steadily growing.

The facility became 100% solar powered. Solar panels collect clean renewable energy from the sun and convert it into electrical energy that is used to power the CorteCros® facility and logistics center. Cortec's European operations and EcoCortec's global sales and marketing will be now operated from our spacious new offices marking a new chapter of business growth in Europe!
