

Cortec Strategic Planning Meeting a Huge Success!

Recently, Cortec's team of Technical and Field Sales Managers met in Saint Paul for an intense planning and strategy session for the upcoming year. The group spent two full days discussing market development, progress toward the aggressive sales goals and how to follow the record-breaking sales of 2005 with an even more impressive 2006!

The meeting concluded with a visit to Cambridge, MN where Cortec's Advanced Films Division recently completed a multi-million dollar expansion including "Line 21"—the largest VpCI dedicated extruder in the business! In order to demonstrate the width of film line #21 is capable of producing, the entire stretch H2 limo shown above can fit INSIDE film produced at CAFD. (Of course a ride in the limo was required by the group in order to fully understand this concept!)
