BIODEGRADABLE PACKAGING FILMS

Biodegradable alternatives to polyethylene films and bags plus performance characteristics superior to LDPE and HDPE are the way that Cortec Corporation describe their Eco Film and Eco Works products. "Both lines were designed with their entire life cycle in mind — from biobased raw material to complete conversion to carbon dioxide and water," says the St. Paul, Minnesota-based firm. Eco Film and Eco Works are available in all forms of polyethylene lines as well as retail packs and boxes. Visit: www.cortecvci.com.
